

Currently there are two sets of authorizations lists in place for Humana Medicare patients-one published by Humana, and one by Mercy. The Humana authorization list has been used for patients managed by the Humana Care Management team, while the Mercy authorization list has been used for patients managed by the Mercy Care Management team. While these lists are basically the same, there are some slight variations between the two.

**Please be advised that effective 5/1/18, providers will be now required to follow the Humana preauthorization list for all Humana Medicare Advantage patients.** It's imperative that staff members are aware of this change to avoid denials.

Below are some commonly used codes that previously did not require an authorization by Mercy Care Management, but will start requiring an authorization beginning on 5/1/18 under the Humana authorization list. Please reference the Humana authorization list at the link below for a full Humana authorization list.
